

Markdown to HTML Converter

A CLI Tool written in Rust that converts Markdown files into styled HTML or PDF documents. Features a live-reloading mode "--live" with a built-in web server for real-time previews.

Installation

1.

Clone the repository :

```
git clone https://github.com/viemmsakh/mdc.git
cd mdc
```

2.

Build with Cargo

```
cargo build --release
```

Usage

Run the program without arguments to see the help screen

Basic Conversion *Outputs a raw HTML snippet to the terminal:*

```
./mdc --input README.md
```

Save to File with Styling *Wraps the content in a full HTML document and saves it to a specific path, infers extension if not given:*

```
./mdc --input README.md --output test/readme --html
```

Save to PDF *Generates a PDF and saves it to a specific path, infers extension if not given:*

```
./mdc --input README.md --output test/readme --pdf
```

Live Preview *Starts a local server and watches for file changes. Everytime you save your markdown file, the browsers at <http://0.0.0.0:3000> will refresh instantly:*

```
./mdc --input README.md --live
```

Command Line Arguments

Flag	Short	Description
--input	-i	Required. Path to the input .md file.
--output	-o	Path to the output file.
--html		Wraps the output in a styled HTML boilerplate.
--pdf		Outputs markdown to PDF.
--live	-l	Watches input for changes and displays updates live in browser.
--port	-p	Port to serve the live preview on (default: 3000).
--help	-h	Displays help information.
--version	-V	Displays version information.
